

INTRODUCTION – UIPATH

What is UiPath?

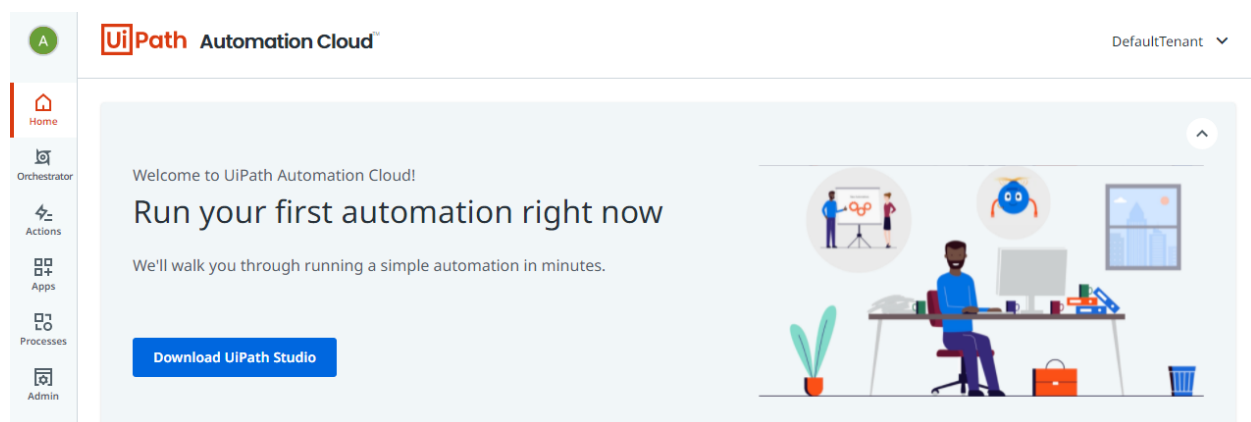

UiPath is leading RPA software and acts as RPA tool where you can automate repetitive, predictive and requires intensive manual effort. UiPath acts as a platform where you can perform **Citrix automation, PDF automation, Web automation, and Windows desktop automation.**

There are two types of robots **attended and unattended robot**. Attended robot is where a robot needs human intervention it might a condition or trigger that we must do as a user. In unattended robots there is no human intervention required the bot may complete it tasks and fetch the results accordingly. These robots can be scheduled, monitored, tracked through Orchestrator.

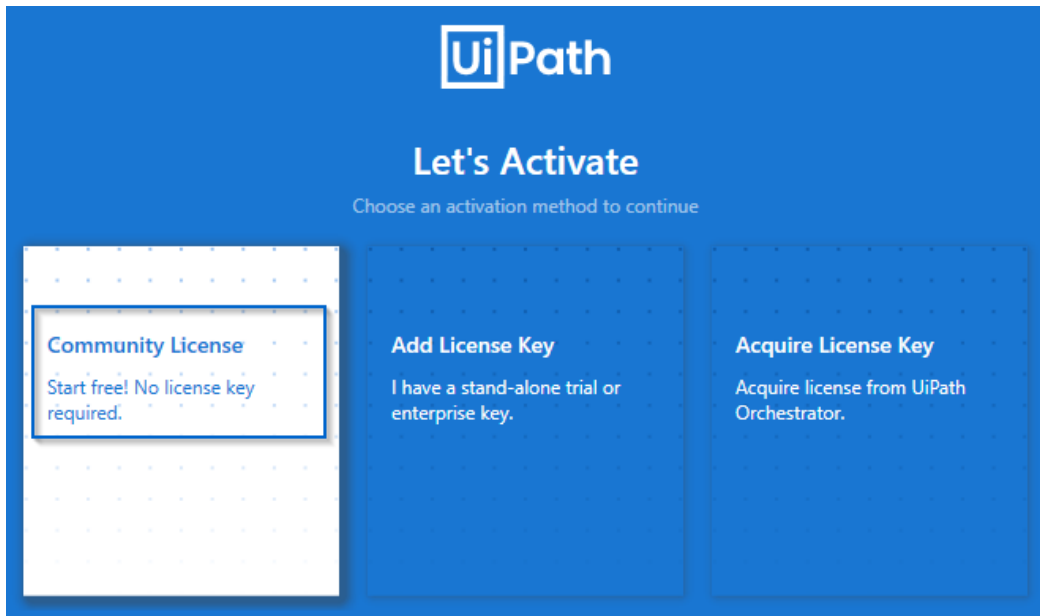

Orchestrator is a web application that **enables you to orchestrate your UiPath Robots in executing repetitive business processes**. Orchestrator lets you manage the creation, monitoring, and deployment of resources in your environment. It acts as an integration point with third-party solutions and applications.

How to install UiPath software?

1. Go to <https://www.uipath.com/> and click Try UiPath for free
